

Ideation Phase

Brainstorm & Idea Prioritization

Date	29-06-2026
Team ID	23A51A05P1
Project Name	Employee ID Card Request
Maximum Marks	4 Marks

Brainstorming:

During the brainstorming phase, I analyzed several organizational processes that could be automated using the ServiceNow platform. Different ideas such as Leave Request Management, Laptop Asset Request, Software Installation Request, Visitor Pass Request, and Employee ID Card Request were considered based on their business value, feasibility, user impact, and the opportunity to demonstrate core ServiceNow functionalities. After evaluating these ideas, I selected the **Employee ID Card Request** process because it is a common organizational requirement that is often handled manually, resulting in delays and increased administrative effort.

Based on this analysis, I developed an **Employee ID Card Request** application using ServiceNow Service Catalog and Flow Designer. The solution allows employees to submit requests for a new or replacement ID card by entering their name, department, and reason for the request. The workflow automatically routes the request for approval, sends an email notification after approval, and creates a catalog task for the administration team to process the request. This automation simplifies the request process, improves efficiency, ensures better tracking, and demonstrates an end-to-end workflow using ServiceNow.
