Problem – Solution Fit

Date	29-06-2026
Team ID	23A51A05P1
Project Name	Employee ID Card Request
Maximum Marks	2 Marks

Solution Fit:

The **Employee ID Card Request System** developed on the ServiceNow platform provides a simple and automated solution for managing new and replacement ID card requests. Employees can submit their requests through a user-friendly Service Catalog by entering their name, department, and the reason for the request, eliminating the need for manual forms or email-based requests.

The system automatically routes each request to the designated approver through Flow Designer. Once approved, an email notification is sent to the employee, and a Catalog Task is created for the administration team to process and issue the ID card. This automation reduces manual intervention, improves request tracking, and ensures a faster and more transparent approval process.

Additionally, the system maintains all request, approval, and task records within the ServiceNow platform, allowing administrators to monitor and manage requests efficiently. By automating the complete request lifecycle, the solution improves operational efficiency, enhances employee experience, and provides a reliable and scalable approach to ID card request management.
