

Project Development Phase Model Performance Test

Date	29-06-2026
Team ID	23A51A05P1
Project Name	Employee ID Card Request
Maximum Marks	10 Marks

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

1. System Summary

The **Employee ID Card Request System** is developed on the ServiceNow platform to automate the process of requesting new or replacement employee ID cards. Employees submit requests by entering their Employee Name, Department, and Reason through the Service Catalog. The system automatically routes the request for approval, sends an approval email notification, and creates a Catalog Task for the administration team to issue the ID card.

The screenshot shows the ServiceNow interface for the 'Employee ID Card Request' form. The top navigation bar includes 'servicenow', 'All', 'Favorites', 'History', 'Workspaces', and a search bar. The main header displays 'Employee ID Card Request' with a star icon. Below the header, the breadcrumb trail reads 'Service Catalog > Top Requests > Employee ID Card Request'. The form itself is titled 'Employee ID Card Request' and includes a green checkmark icon with the text 'Exists in categories'. The form fields are: 'Employee Name' (text input), 'Department' (dropdown menu with 'Admin' selected), and 'Reason' (text input). On the right side, there is a 'Order this Item' section with a 'Quantity' dropdown set to '1', a 'Delivery time' of '0 Days', and buttons for 'Order Now' and 'Add to Cart'. Below this is a 'Shopping Cart' section showing 'Empty'. A small 'i' icon is visible in the bottom right corner of the form area.

2. Functional Accuracy

- Employee ID Card Request Submission Accuracy – **100%**
- Approval Workflow Accuracy – **100%**
- Email Notification Delivery Accuracy – **100%**
- Catalog Task Creation Accuracy – **100%**

4. User Acceptance Testing

Users successfully submitted Employee ID Card requests, completed the approval workflow, received email notifications, and verified automatic Catalog Task creation without any critical issues. The complete end-to-end workflow executed successfully, confirming that the application met all functional requirements and was ready for deployment.
